

DEZOSTER

Ionization tubes

Ionization tubes are **the basic active element of all DEZOSTER ionizers**. They activate natural ecological cleaning, disinfection and air regeneration. **They significantly reduce the number of germs, neutralize odors and create fresh air.** They also act preventively against the spread of airborne infections.

They do not require any chemicals for their operation, do not endanger the environment and can be recycled.

FEATURES

- Produced in **five standard sizes**
- Plastic parts made of **high-quality non-flammable material** of class UL94-V0
- Do not need **any chemicals for their activity**
- **Do not threaten the environment**
- Can be **recycled**
